

● Unselected states/views ● Selected clean anchor ● Perturbed view — 90% t-SNE covariance envelope

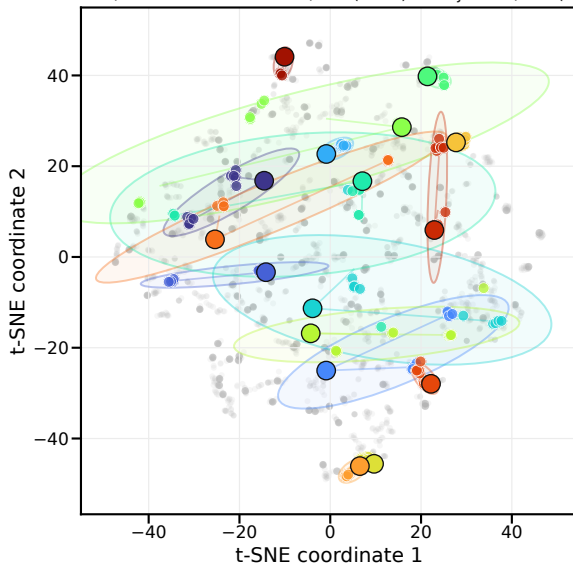

(a) No augmentation · Encoder

median r/NN = 1.41 · $r < \text{NN}$: 22/128 (17.2%) · disjoint: 0/128 (0.0%)

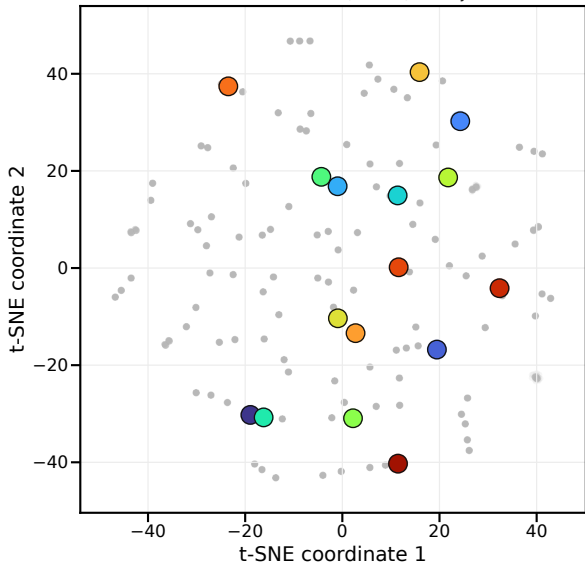

(b) No augmentation · After eight rollout steps

median r/NN = 1.86 · $r < \text{NN}$: 7/128 (5.5%) · disjoint: 0/128 (0.0%)

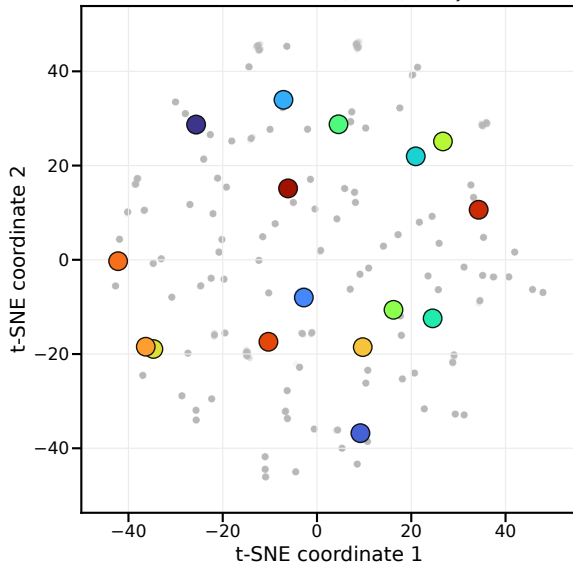

(c) Gaussian augmentation · Encoder

median r/NN = 0.10 · $r < \text{NN}$: 125/128 (97.7%) · disjoint: 122/128 (95.3%)

(d) Gaussian augmentation · After eight rollout steps

median r/NN = 0.19 · $r < \text{NN}$: 122/128 (95.3%) · disjoint: 108/128 (84.4%)

NN denotes the nearest other clean anchor in the original high-dimensional representation.
